

SAFETY EDUCATION & TRAINING

Safety Education is considered with Man in relationship to his work environment, his motivations, as well as his behaviour, the hazards that confront him, (both occupational and domestic) and with his ability to shield himself from the hazards.

Preventing accidents is not a simple matter, for so many variables affect the accident rate, that, it is difficult to determine the most effective remedial action. But since human error is probably the outstanding cause of 85 % of the accidents, Education and training for safe living is the best approach to the problem of minimizing them. The most effective remedial action for developing Safety culture is the need for increased emphasis on Education and Training. Implementing training to the employees on topics pertaining to Occupational Safety and through Safety Appreciation Programme [SAP] Environment, has been an effective tool in Accident Prevention drive. After conducting the Safety Training a feed back from the employees is most important to improve the quality of the Training and to bridge the gap of deficiencies in the training system. We offer inhouse Safety Training Programme on need based for various type of industry. Given below the most common topics dealt for Training the employees at various level.

- ☞ Basic Principle of Accident Prevention.
- ☞ Accident Reporting & Investigation.
